

AngularJS - MVC

BY HARSHA VARDHAN

AngularJS - MVC

- ▶ AngularJS is built based on “MVC” Architecture.
- ▶ MVC stands for “Model – View – Controller”.
 - That means the code is divided as 3 major parts like “Model”, “View” and “Controller”.
- ▶ MVC is very popular today because it separates the design logic with application logic.

AngularJS - MVC

- ▶ **Model:** It is the JSON object that stores the data.
- ▶ **View:** It is the html code that displays model data.
- ▶ **Controller:** It is the JavaScript code that loads data into model and supplies the same to the view.

AngularJS - MVC
